

Lack of funds and IT resource are no barriers to CMMS adoption and use

Pirana as a hosted solution is the ultimately affordable, zero-hassle solution to your computerised maintenance management needs

Sign up to hosted **Pirana** and you can be up and running with professional CMMS in a flash.

Pirana demolishes the traditional cost and technical barriers to CMMS acquisition and use. For a small monthly fee, Shire will host **Pirana** for you in a secure data centre, managing the whole service, not least data preservation and disaster avoidance. To get going at your end, you only need a device with a web browser.

In contrast to a CMMS deployed on your own premises, you don't need any up-front capital, IT skills, new servers or other extra kit. Plus, you don't have to worry about system back-ups, crashes and unpleasant stuff like that.

Shire also automatically upgrades the system-in-use and will even monitor its correct usage.

On top of **Pirana**'s already extraordinary benefits - including *access-from-anywhere*, *real-time operation* and *operating system flexibility* - you get much more.

Unique advantages

- No big up-front spend. The low kick-off price means you don't have to jump through CapEx hoops
- Lowest total lifetime cost of 'ownership'
- No IT skills necessary. Forget about system installation, upgrades, backups, crashes, attacks, etc
- No implementation delay. Super-fast deployment across multiple sites
- Simple, expandable, reconfigurable and future-proof. Sign up for what you need now – you can add to your system at any time
- Automatic updates. Only one version of **Pirana** CMMS is ever in use - the latest and best
- Bullet-proof security. Data is access-protected, fire-walled and backed up for your total peace of mind.
- All-inclusive monthly fee with minimum fuss.

CMMS life can't get better than this!

Just like another utility

Think of hosted **Pirana** as another utility. CMMS functionality is right there for you to use 'on demand'.

Get and forget!

Pirana magics away all the bothers of traditional system ownership.

You side-step customary implementation delays and can be up and running straight away. You'll also never have to face those time-consuming and scary IT issues that are often the blight of less resilient on-premises systems. Get it and forget it.

One size fits all

Pirana is ideal for both small and large organisations. The accessibility and economics of the solution will obviously have particular appeal for small to medium-sized enterprises. Those with a mobile workforce will find the advantages simply colossal.

Low cost, hassle free and flexible. **Pirana** really is a dream come true.
